

TOPIC 3: Deakin Graduate Learning Outcome 6 Self-management: revised assessment task

Siti selected one of her assessment tasks for re-design to include three aspects of self-management in her first year unit: Note-taking; Digital research activity; Reflective self-direction (problem-based)

TEACHING IDEAS

Summary of Siti's revised assessment task:

Task: Research concerns regarding problems in the professional field, select one problem and present a solution plan

Select one problem and establish:

- The nature of the problem
- What others have said about possible solutions to the problem
- What discipline knowledge might be relevant to the problem
- How can I find out further information to help present a solution to the problem?
- A solution plan
- How could I test my ideas for a solution?
- How could I improve my solution?

Compile a set of speaker's notes (with explanatory slides) you will use to give an informative presentation of your chosen issue to a related professional association

Record your presentation and submit for assessment

What Now?

Siti plans how she will:

- Make the self-management focus explicit to the students through a detailed assessment rubric
- Teach and monitor student learning during the assessment task
- Provide formative feedback during the assessment task
